

Aleph Farms

What they do:

Grow real meat from animal cells in a lab without harming animals.

Problem they solve:

Traditional meat production harms the environment, uses massive resources, and raises ethical concerns. Aleph Farms offers a sustainable, cruelty-free alternative.

Why is this important?

Farms**

OrCam

What they do:

Developed a wearable device that reads printed and digital text out loud for people with visual impairments.

Problem they solve:

Many blind or visually impaired people struggle with everyday tasks like reading signs, menus, or documents. OrCam gives them more independence.

Why is this important?

 **ORCAM**

BeeHero

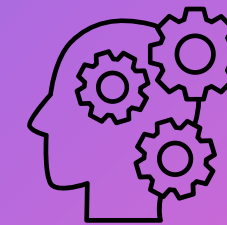

What they do:

Use sensors and AI to monitor beehives and improve crop pollination.

Problem they solve:

Global bee populations are declining, threatening food security. BeeHero helps optimize pollination and protect agricultural productivity.

Why is this important?

 **BeeHero**

DayTwo

What they do:

Analyze the gut microbiome to create personalized nutrition plans that help balance blood sugar levels.

Problem they solve:

People with diabetes or metabolic issues struggle to manage blood sugar. DayTwo offers a science-based, non-medication solution tailored to each individual's biology.

Why is this important?

AgriTask

What they do:

Provide a smart farm management platform that integrates data from the field, weather, and operations into one decision-support system.

Problem they solve:

Farmers often lack real-time insights into what's happening in their fields. AgriTask helps reduce waste, improve crop yields, and make farming more efficient.
